

MUHAMMAD FAIZAN

AI/ML Undergraduate • Seeking AI Internship

faizanfaisal358@gmail.com | 0314-5618264 | Rawalpindi, Punjab, Pakistan

BS Artificial Intelligence student (6th semester) with hands-on experience building graph-algorithm applications, rule-based detection systems, and parallel-computing solutions. Comfortable moving from coursework theory to working code — seeking an internship where I can apply AI/ML fundamentals to real production problems.

EDUCATION

BS Artificial Intelligence — Capital University of Science and Technology (CUST), Islamabad

Expected Graduation: 2028

- Relevant coursework: Analysis of Algorithms, Parallel & Distributed Computing, Computer Organization & Assembly Language, Software Engineering, Data Structures

TECHNICAL SKILLS

-
- Languages: Python, JavaScript, TypeScript, C, RISC-V Assembly
 - Parallel Computing: CUDA C (GPU kernels on Google Colab)
 - Web/Backend: Node.js, Express.js, HTML/CSS
 - Concepts: Graph algorithms (BFS, centrality, community detection), SDLC models, Agile, UML modeling
 - Tools: Git/GitHub, VS Code, Google Colab

PROJECTS

Social Network Analyzer | *Vanilla JavaScript, HTML/CSS*

- Built an interactive, browser-based social network analysis tool for a university algorithms project — no backend, fully client-side.
- Implemented BFS for shortest-path/connectivity queries, degree/betweenness centrality for influence ranking, and a community detection algorithm to cluster related nodes.
- Delivered a working demo plus a full technical report documenting algorithm design and complexity analysis.

Rule-Based Social Engineering Detector | *Python*

- Designed and built detector.py, a lightweight script that flags social-engineering attempts (phishing, pretexting language) in text using keyword and pattern matching.
- Deliberately avoided ML dependencies to keep the tool zero-setup and instantly runnable — prioritized a shippable, dependency-free deliverable over unnecessary complexity.

EduTrack — Student Task & Attendance Manager | *Node.js, Express, TypeScript*

- Co-built a full-stack web application for a Software Engineering group project to manage student tasks and attendance records.
- Owned the requirements engineering and system design documentation (UML diagrams, SDLC planning) alongside backend development.

CUDA GPU Parallel Computing Labs | *CUDA C, Google Colab*

- Implemented multiple parallel algorithms in CUDA C for a Parallel & Distributed Computing course, comparing GPU kernel performance against sequential CPU baselines.
